Test Items, Method and Results:

EN 13501-1:2018 Fire classification of construction products and building elements - Part 1: Classification using data from reaction to fire tests

1.1 CRITICAL HEAT FLUX TEST

The test was conducted in accordance with EN ISO 9239-1:2010. This test evaluates the wind-opposed burning behaviour and spread of flame of horizontally mounted floorings exposed to a heat flux radiant gradient in a test chamber, when ignited with pilot flames.

1.2 IGNITABILITY TEST

The test was conducted in accordance with EN ISO 11925-2:2020. This test evaluates the ignitability of a product under exposure to a small flame.

1.3 CLASSIFICATION CRITERIA

The classification was determined in accordance with EN 13501-1:2018. The class $C_{\rm fl}$ with its corresponding fire performance is given in the table below.

Table - Classes of reaction to fire performance for flooring.

Class	Test Method(s)	Classification criteria	Additional classifications
C	EN ISO 9239-1 ^a and	Critical flux ^b ≥ 4.5 kW/m ²	Smoke production ^c
C _{fl}	EN ISO 11925-2 ^d Exposure = 15 s	$F_S \le 150 \text{ mm within } 20 \text{ s}$	-

Note:

- a. Test duration = 30 min.
- b. Critical flux is defined as the radiant flux at which the flame extinguishes or the radiant flux after a test period of 30 min, whichever is the lower (i.e. the flux corresponding with the furthest extent of spread of flame within 30 min).
- c. $s1 = Smoke \le 750 \%$ minutes; s2 = not s1.
- d. Under conditions of surface flame attack and, if appropriate to the end use application of the product, edge flame attack.

Test Items, Method and Results:

2 RESULTS AND OBSERATIONS

Method	Parameter	Result
	Critical flux (transverse), kW/m ²	5.8
EN ISO 9239-1:2010	Critical flux (longitudinal), kW/m²	4.9
	Smoke production, % minutes	199
EN ISO 11925-2:2020 Exposure = 15 s	$F_S \le 150 \text{ mm within } 20 \text{ s}$	Yes

3 CLASSIFICATION

The classification has been carried out in accordance with EN 13501-1.
